

What is INERGEN®?

- ▶ **INERGEN®** is a patented fire extinguishing gas mixture that creates fire-proof environments.
- ▶ It offers total safety and peace of mind by extinguishing fires instantly in any location.
- ▶ INERGEN® is made of gases already found naturally in the atmosphere:

World's safest system

INERGEN® is the world's safest extinguishing system, causing no harm to human health. This has been proven in practice by more than 5000 full-scale tests. No other solution can guarantee that.

What does this mean?

By avoiding the use of dangerous chemicals or water, INERGEN® offers the best:

- ▶ Protection of **LIFE**
- ▶ Protection of **ASSETS**
- ▶ Protection of **ENVIRONMENT**

Ensures survival of equipment

Chemical and water alternatives can quickly destroy expensive electronic equipment. Because INERGEN® snuffs out fires before they spread, there is no risk of damage to valuable inventory.

Snuffs out fires before they start

Like sprinkler or halon systems INERGEN® is activated by detectors. Once a fire is detected, INERGEN® is released. It essentially suffocates the fire in just 30-40 seconds. It works by displacing the oxygen that allows the fire to breathe – and it does so without risk to humans. There is no odour, no smoke, and no damaging chemicals.

Environmentally friendly

INERGEN® offers a friendly alternative that does not damage the ozone layer. When it is released, the gases simply take their natural place in the atmosphere. The small amount of carbon dioxide is derived from natural processes.

For peace of mind

To achieve total safety for your company, please contact **Seasafenorway AS**, Postboks: 2050, 6028 Ålesund, Norway

INERGEN®

Protects human lives, property and the environment

The fire extinguishing specialists
Fire Eater specialises in the development of fire extinguishing systems for the industry.

Fire eater systems use naturally occurring gases which are proven to smother fires before they spread-without risk of harming your people or your facility.

For more information about INERGEN®, please contact Fire Eater's engineering department.
